DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 - Deng et al. (5,739,664) discloses a control system for an electric motor, comprising: a first calculation module that receives a modified torque command and a calculated stator flux command and that generates first and second current commands and first and second voltage commands (Fig. 1, #s 36 and 38 are the first module and receive a torque command T_e^* and a stator flux command λ_s^* and output i_{qs}^* , i_{ds}^* , v_{qs}^* , and v_{ds}^*); and a flux weakening module that generates the flux command based on the angular stator velocity, the dc voltage, and the frequency (Fig. 1, #26 weakens the flux based on λ_s^*0 , ω_e and V_{dc}).
 - Walters et al. (6,407,531) discloses a first calculation module as claimed.
 - However, with respect to claims 1 and 8, the primary reason for allowance is because the prior art does not disclose a voltage magnitude calculation unit that generates a voltage magnitude based on the first and second voltage commands; a reference voltage calculator module that generates a reference voltage based on a DC link, an angular stator velocity, and the first and second current commands; and a flux weakening module that generates the calculated flux command based on the angular stator velocity, the reference voltage, and the voltage magnitude.

3. Therefore, based on the arguments and amendments presented by the Applicant, the Examiner acknowledges the Prior Art fails to make obvious the Applicant's claimed invention.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
